

UR FOG siempre se ha tratado de proteger sus activos del robo. Sin embargo, ahora gracias a **PURIFOG**, la higiene ambiental y su salud también son nuestra prioridad.

Aerosol probado y verificado con el Departamento de Química de la Universidad de Torino (ITALIA)

Sistema de "doble uso" que combina un generador de niebla anti-intrusión insuperable con una poderosa herramienta de limpieza con acción higienizante

Limpia a fondo y hace que cualquier ambiente sea higiénico

La niebla permanece en suspensión durante varias horas, arrastrando hacia abajo cualquier partícula que está en el aire y alcanza cualquier grieta, ángulo, superficie, pared con una eficiencia de más de 1700 veces más que un dispensador de rociado normal.

También puedes activarlo de forma remota por la noche

Patentado

Formulación de niebla no tóxica a base de alcohol, agua, dipropilenglicol y sales de amonio cuaternario.

UR FOG has always been about protecting your properties from theft, as of today, thanks to PURIFOG, environmental hygiene and your health are also our top priority

MODULAR

FAST PUMP PRO PLUS

TO CLEAN, HYGIENE, SAFEGUARD

Safer than any existing alarm, with an estimated efficiency of over 1700 times higher than a normal cleaner or hygienizer

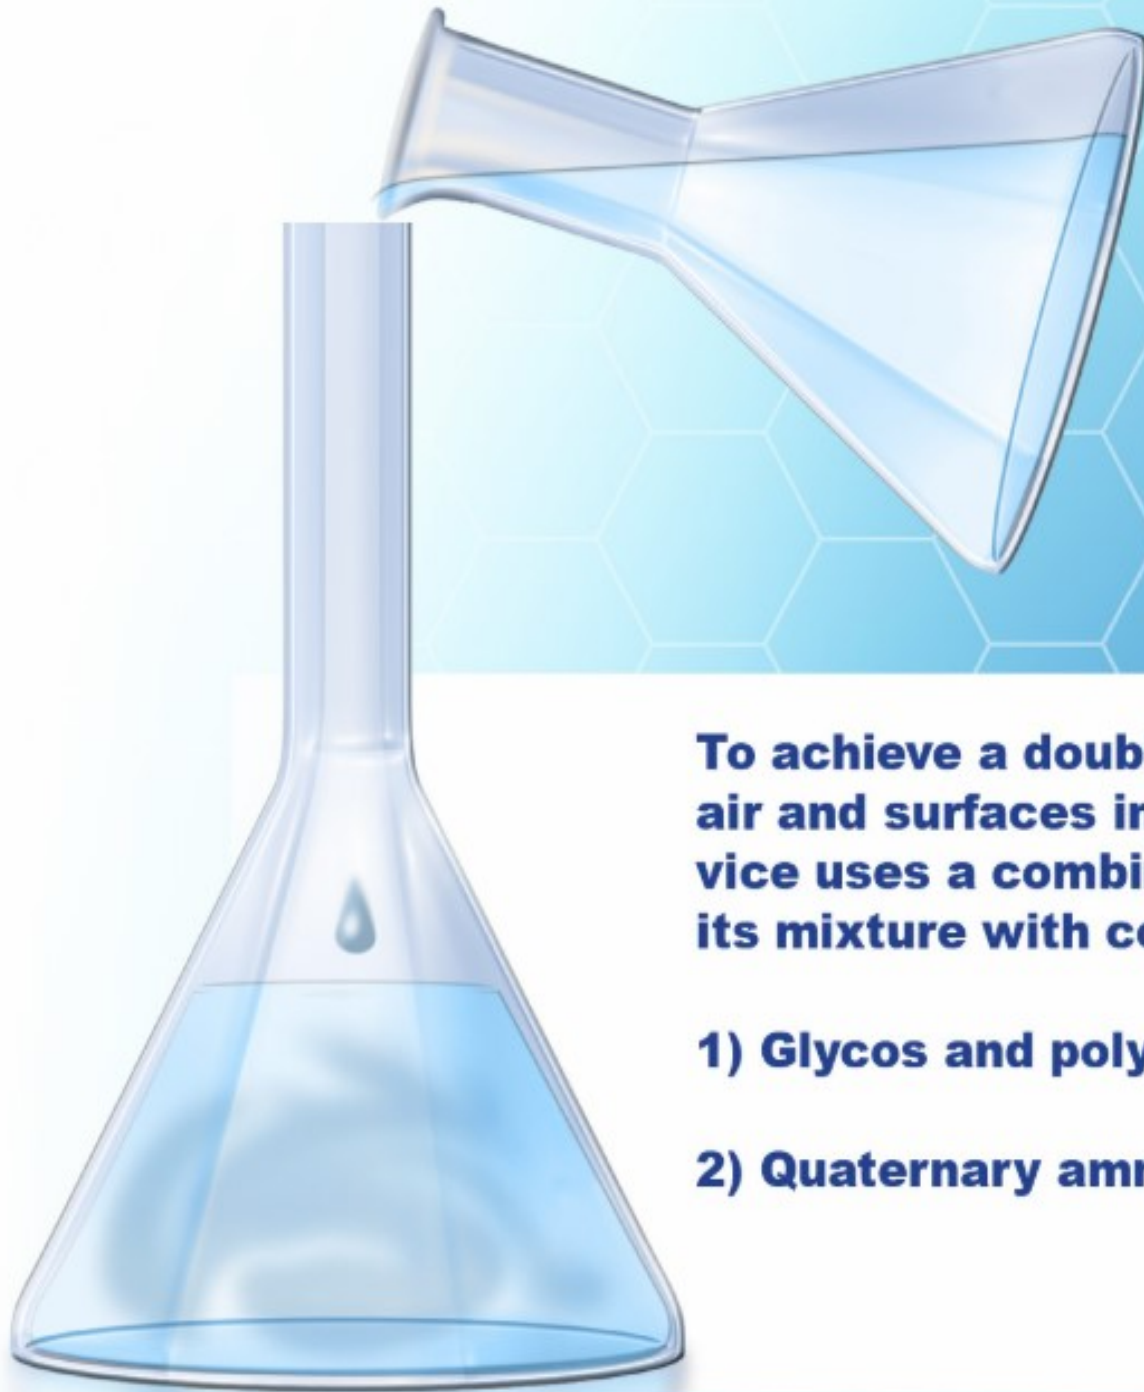

**Only with PURIFOG
your environment will
be hygienic and safe
from thieves**

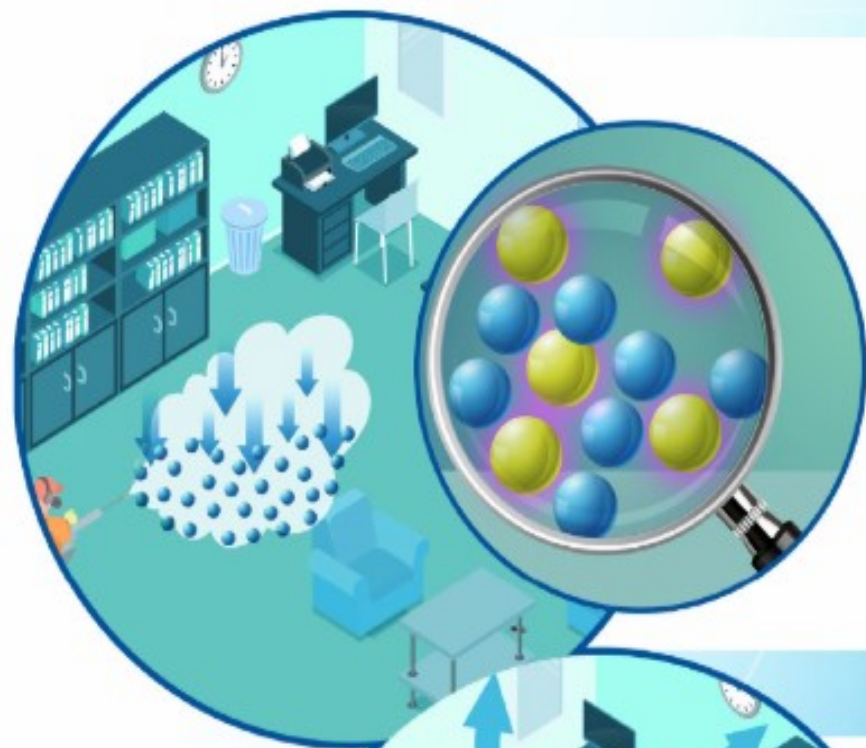

**The deposition of the PURIFOG
fluid is guaranteed on all surfaces
of the treated internal environment,
including vertical walls, corners,
crevices and objects inside it.**

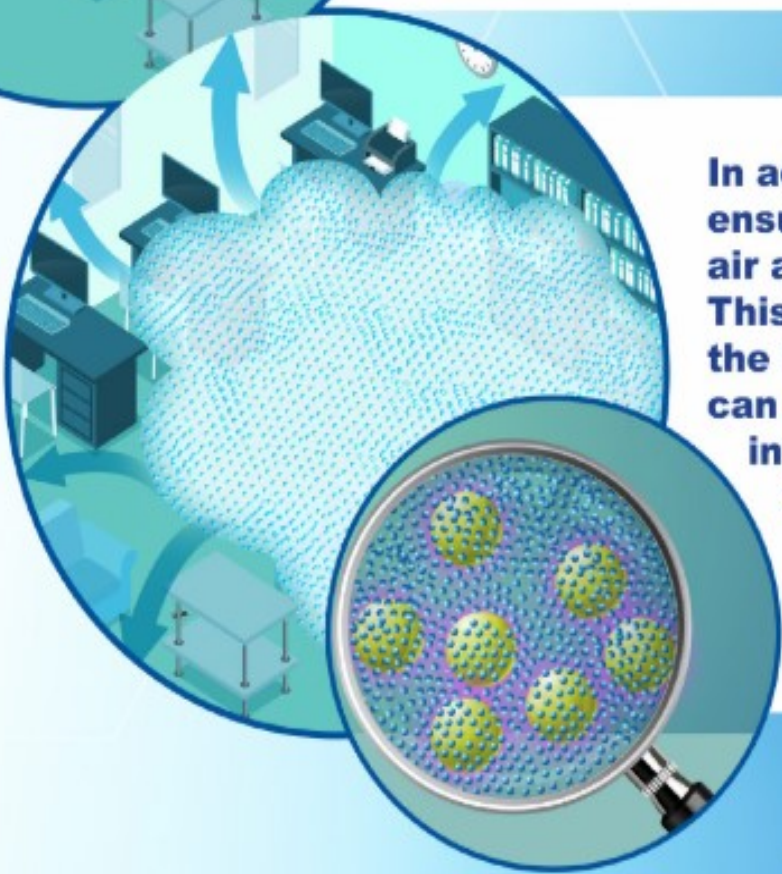

To achieve a double hygienic function for both air and surfaces in the room, the PURIFOG device uses a combination of two components for its mixture with complementary action:

- 1) Glycos and polyalcles**
- 2) Quaternary ammonium compound**

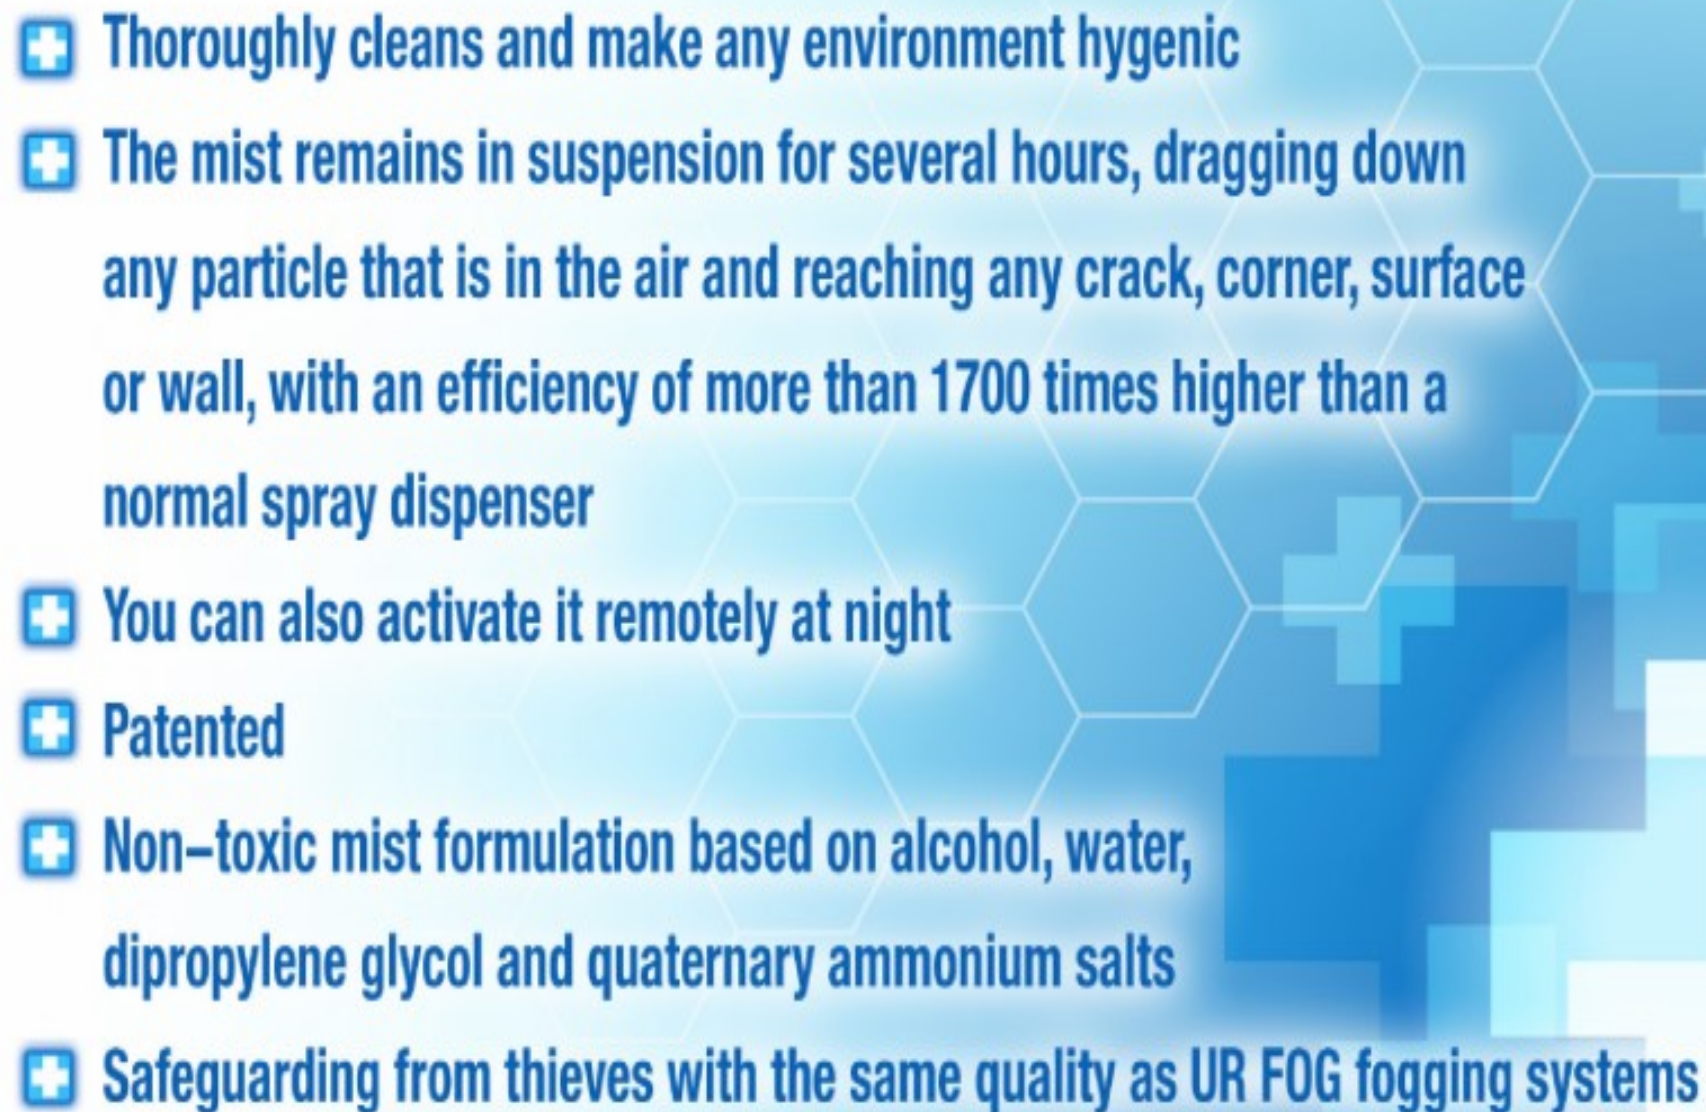

Spraying systems generally produce millimetre droplets that settle very quickly on horizontal surfaces and have a very low diffusion due to their size and weight and therefore the likelihood of capturing particles suspended in the air is very low. As a result, it is extremely difficult to achieve a good hygienization of the environment treated.

In addition, the high diffusiveness of the aerosol ensures the capture of particles present in the air and surfaces.

This system can operate unattended, without the intervention of specialized personnel and can work when there are no people in the internal environment (for example, during the night hours). The generated aerosol has a dimensional distribution range of 1 to 5 microns, which ensures a high diffusion of the emitted droplets.

- 
- ✚ Thoroughly cleans and make any environment hygenic
 - ✚ The mist remains in suspension for several hours, dragging down any particle that is in the air and reaching any crack, corner, surface or wall, with an efficiency of more than 1700 times higher than a normal spray dispenser
 - ✚ You can also activate it remotely at night
 - ✚ Patented
 - ✚ Non-toxic mist formulation based on alcohol, water, dipropylene glycol and quaternary ammonium salts
 - ✚ Safeguarding from thieves with the same quality as UR FOG fogging systems
